

Simplify Privacy Regulations & Become Compliant with FileCloud's Compliance Center

Solution Brief

Compliance Support for ITAR, HIPAA, GDPR, NIST 800-171 & Saudi PDPL

FileCloud's hyper-secure EFSS solution is structured around zero trust security pillars. Security and compliance are mutually dependent. FileCloud's Compliance Center helps you to streamline intricate regulations and remove the manual workload involved in fully safeguarding your enterprise data.

With its intuitive dashboard, user-friendly UI, robust audit capabilities, and handy tables to help you navigate complex regulations, the Compliance Center in the FileCloud admin portal is a robust streamlining tool. It automates the daily work of those responsible for overseeing rigorous enterprise data compliance requirements.

Compliance Center UI

Following best practices in relation to data privacy regulations is simplified with FileCloud's easy-to-follow Compliance Center UI. Regulations are matched to their corresponding best practices for easy enterprise-wide monitoring and adherence. Admins can quickly spot violations and address them, toggle configuration settings, and generate customized reports for governance and auditing purposes.

The screenshot displays the FileCloud Compliance Center dashboard. At the top, there is a navigation bar with the FileCloud logo and the word "Compliance". Below this is a menu with tabs for "Overview", "HIPAA", "GDPR", "ITAR", "PDPL", and "NIST". The "Overview" tab is currently selected. In the top right corner of the dashboard, there is an "Export Events" button.

The main content area is divided into two columns:

- Enabled Configurations:** This section shows that all 5 configurations are enabled. Each configuration includes a status icon (green checkmark for enforced, red triangle for failed), the number of rules enforced, and the number of failed rules.
 - HIPAA Compliance Guided Configuration:** 21 rules enforced, 2 failed.
 - ITAR Compliance Guided Configuration:** 15 rules enforced, 8 failed.
 - GDPR Compliance Guided Configuration:** 21 rules enforced, 0 failed.
 - PDPL Compliance Guided Configuration:** 10 rules enforced, 1 failed.
 - NIST Compliance Guided Configuration:** 28 rules enforced, 0 failed.
- Recent Events:** This section shows a list of violations.
 - MAR 28 2023:**
 - Storage is not fully encrypted (Violation: ITAR Rule 120.54(5)) at 3:27PM.
 - Share may not be public (Violation: ITAR Rule 120.54(2)(3)) at 1:14PM.
 - MAR 27 2023:**
 - Storage is not fully encrypted (Violation: ITAR Rule 120.54(5)) at 3:52PM.
 - Share may not be public (Violation: ITAR Rule 120.54(2)(3)) at 2:11PM.
 - Public share created (Violation: HIPAA Rule 1.2) at 1:30PM.

Supported Regulations

ITAR

Defense contractors and those dealing in military equipment clearly fall under the International Traffic in Arms Regulations (ITAR), but it also affects sectors such as telecommunications, maritime, and aviation. If your company is involved in exporting goods or services that are part of the U.S. military supply chain, you must assess whether it is affected by ITAR.

Taking steps to avoid the heavy penalties for non-compliance with ITAR is prudent and required, but it can be complicated. FileCloud's Compliance Center has comprehensive ITAR support. You can seamlessly check your enterprise's level of compliance with ITAR, spot problems, and correct them quickly.

GDPR

All companies that handle EU citizens' personal data must comply with the General Data Protection Regulation (GDPR), which is the toughest global privacy law. Getting it right can be an immense challenge for large enterprises that process large volumes of data.

The GDPR tab within FileCloud's Compliance Center lets admins check enterprise-wide adherence quickly, as well as generate customized audit reports to meet organizational or regulatory requirements.

HIPAA

The Health Insurance Portability and Accountability Act (HIPAA) sets out standards to prevent the unauthorized sharing of sensitive health information. Healthcare providers, plans, clearinghouses, and business associates are required to meet these regulations to protect sensitive health information. Electronic protected health information (ePHI) is also subject to HIPAA protections.

The Compliance Center has all the tools you need to ensure your organization is protecting highly sensitive patient information to exacting HIPAA standards.

PDPL

The Kingdom of Saudi Arabia enacted the Personal Data Protection Law (PDPL) in 2023 to protect the privacy of its citizens. It is like the GDPR in terms of stringency and penalties for non-compliance. The PDPL covers all entities handling data about Saudi citizens, regardless of where the companies are headquartered.

FileCloud has streamlined the challenges entailed in PDPL compliance through its Compliance Center. Remove the manual work involved in getting your organization up to speed on the PDPL with FileCloud.

NIST 800-171

The National Institute of Standards and Technology (NIST) in the U.S. established NIST 800-171 to regulate the use of controlled unclassified information (CUI). CUI is often sensitive, so compliance is mandatory for all entities that handle it on behalf of the U.S. government.

NIST 800-171 encompasses numerous aspects of information security, including access control, configuration, authentication, incident response, and more. FileCloud's Compliance Center streamlines adherence to NIST and reduces the time investment involved in ensuring compliance.

Powerful Compliance Support for Full Command Over Enterprise Data

Smart DLP

Create metadata tags for sensitive files, such as defense-related technical data, and apply DLP rules with a Smart Classification Engine throughout the data life cycle.

View-Only Access

Restrict sharing access to reduce unauthorized tampering with sensitive information. Prevent downloads, editing, and deletion of files that fall under regulatory restrictions.

FIPS 140-2 Encryption

Protect files at rest and in transit with "FIPS mode" in FileCloud. FIPS 140-2 compliant cryptographic libraries enforce U.S. and Canadian government security standards.

Audit Logs

Generate logs to check information about your system, including new accounts created, user logins, user uploads and downloads, and more.

Remote Wipe

Block specific clients from FileCloud, such as lost or stolen devices, and remove all FileCloud data from these devices.

Multi-Layered Security

Monitor SSL, encryption, and audit settings as an admin for easy compliance with legal requirements.

Activate your FileCloud Account Today!

- ✓ Secure file sharing with partners, clients, and team members
- ✓ Convenient access to files and folders with Drive app and browser
- ✓ Hosted on-premises with backup so you keep full control over your data
- ✓ Microsoft Office and Outlook integrations make work even easier
