

Data Sovereignty with FileCloud

Sovereign File Sharing, Sync, & Storage for Global Enterprises

The Challenge

In today's data-driven economy, organizations face mounting pressure to comply with data protection regulations while maintaining operational efficiency. Data sovereignty—the principle that digital information is subject to the laws of the country where it's stored—has become a critical consideration for enterprises and government agencies alike.

Key Data Sovereignty Challenges

Regulatory Compliance

IP Protection

Security Risks

Legal Accountability

The FileCloud Solution

FileCloud delivers enterprise file sharing and sync (EFSS) capabilities while ensuring complete data sovereignty compliance.

Sovereign Cloud Infrastructure

FileCloud enables true cloud sovereignty through deployment flexibility—on-premises, in government-certified data centers, or region-specific cloud environments. Data stays within the selected jurisdiction while delivering the scalability and collaboration features of modern cloud platforms.

Zero Trust Security Architecture

Our framework provides multi-layered protection including end-to-end encryption, two-factor authentication, granular role-based access controls, and Zero Trust File Sharing®. Organizations maintain complete authority over data location, access policies, and security measures.

Compliance-Ready Deployment

FileCloud supports compliance requirements of major regulatory frameworks, including GDPR, HIPAA, ITAR, and more, with on-premises, hybrid, and region-specific hosting options. Built-in compliance features help organizations avoid penalties and legal risks.

Data Residency Assurance

Leverage the power of the cloud without sacrificing data residency. Deploy FileCloud locally or in-region to meet legal and operational requirements. In the event of a breach or disaster, data can be quickly recovered under local authority, ensuring business continuity.

FileCloud Key Benefits

- ✓ Streamlined Access & Collaboration
- ✓ Enhanced Compliance and Risk Management
- ✓ Strengthened Data Security
- ✓ Intellectual Property Protection
- ✓ Privacy and Legal Control
- ✓ Operational Flexibility

Why FileCloud for Data Sovereignty?

Proven Enterprise Platform

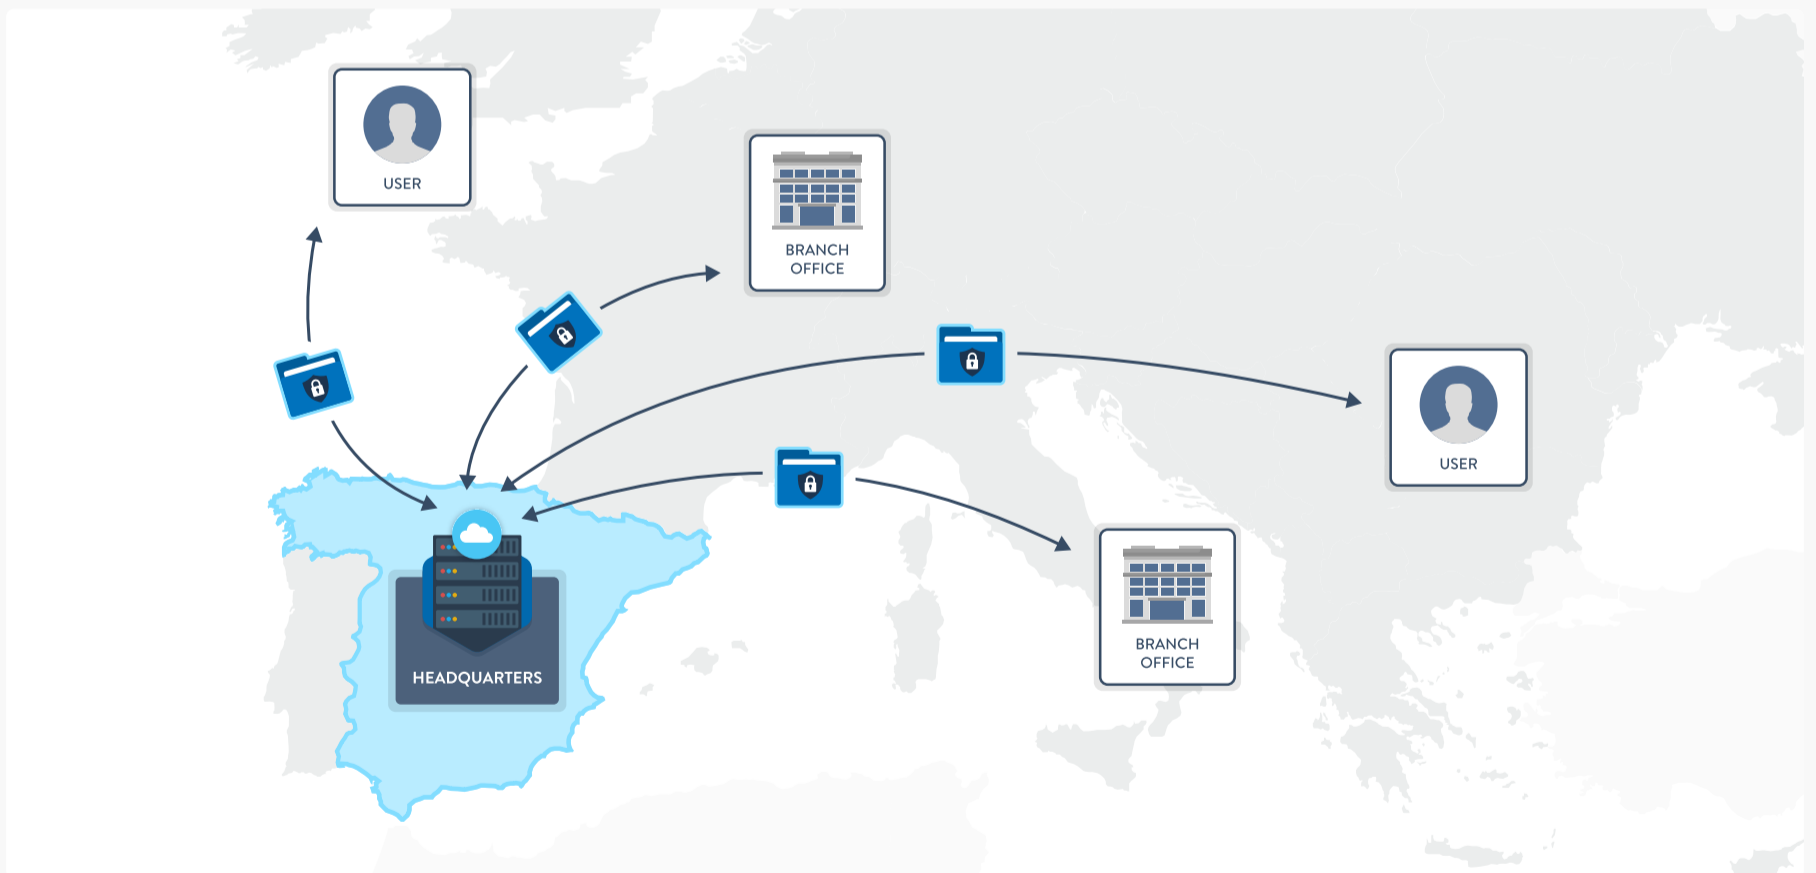

Trusted by organizations worldwide for secure file sharing and collaboration with full sovereignty control.

Government and Enterprise Grade

Built to handle classified, regulated, and proprietary data for both government agencies and enterprises.

No Compromise Architecture

Deliver modern collaboration capabilities while maintaining complete data sovereignty and regulatory compliance.

Get Started with FileCloud

Protect your organization's data sovereignty while enabling secure, modern collaboration. FileCloud provides the tools, flexibility, and control needed to meet regulatory requirements without sacrificing productivity.
