FileCloud for Education Institutes, Schools, and Universities
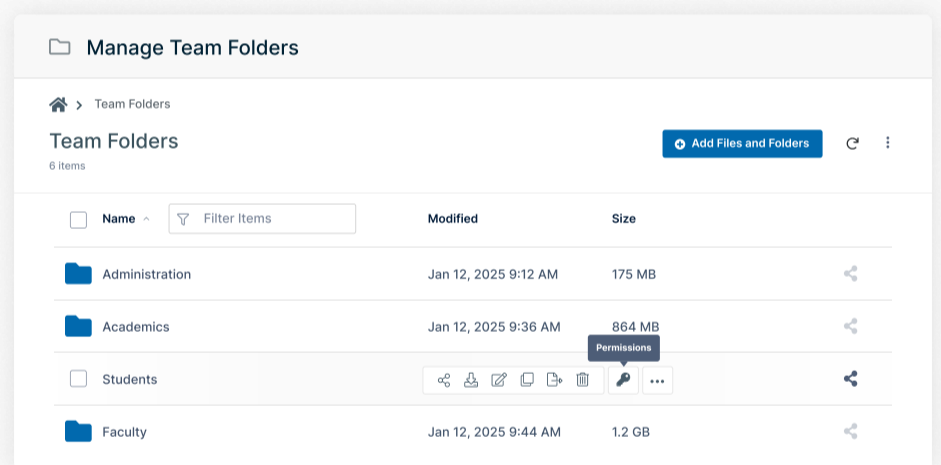

Solution Brief

FileCloud: Secure Cloud Storage and Collaboration for Modern Education

FileCloud enables educational institutions to securely store, share, and collaborate on files while maintaining complete data control and supporting compliance. The platform combines enterprise-grade security with intuitive collaboration tools that promote both on-campus and remote learning environments, as well as administrative functions.
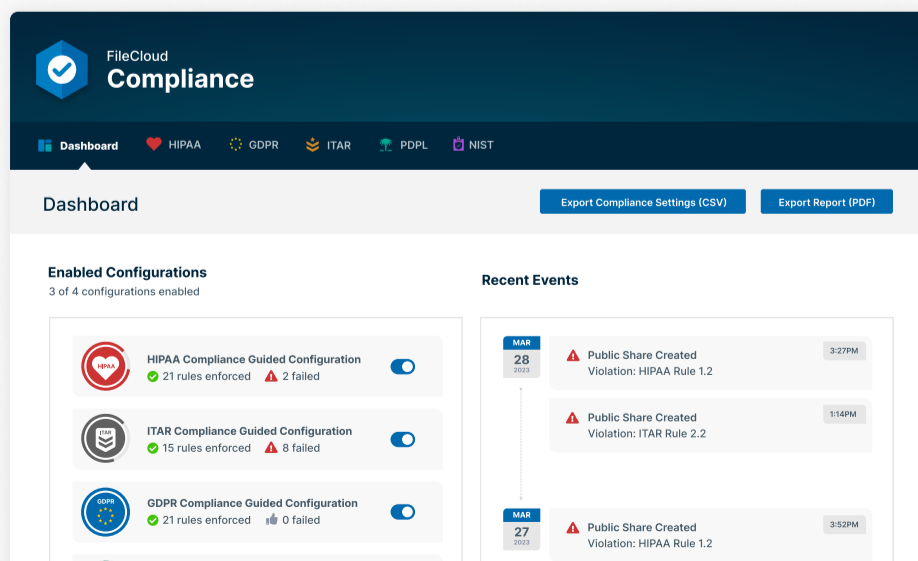

Key Benefits

Centralized Content Management

FileCloud provides a single source of truth for educational content, allowing faculty and staff to securely store and organize course materials, research data, and administrative documents while controlling access permissions across departments.

Enhanced Remote Learning Support

Enable seamless remote and hybrid learning experiences through secure file sharing, real-time document collaboration, and mobile access that keeps students and faculty connected from any location or device.

Simplified Compliance & Security

Meet GDPR, COPPA, and FERPA compliance requirements addressing digital file security, sharing, and collaboration through FileCloud's comprehensive security tools (such as encryption, audit logs, and granular access controls.)

Functional Highlights

Securely share large files, datasets, and research materials while controlling access and permissions.

Access course materials and collaborate on group projects in a centralized digital workspace.

Leverage audit trails and controls for data governance and regulatory compliance.

Integrate with existing systems to modernize IT infrastructure for secure data storage and remote access.

FileCloud Supports Education Industry Requirements

Use Case	FileCloud Solution
Hybrid Storage Architecture	Deploy on-premises, in the cloud, or as a hybrid solution to maintain complete control over sensitive data while enabling flexible access.
Active Directory/SAML Integration	Authenticate users through existing institution systems and maintain consistent access controls for faculty, staff, and shifting populations of students.
Customizable Branded Portals	Create department-specific portals with institutional branding for organized content delivery and professional presentation.
Document Preview & Editing	Enable students and faculty to view and edit files without relying on local downloads, improving collaboration and reducing version conflicts.
Mobile Content Access	Provide secure access to educational materials through iOS and Android apps, supporting modern learning styles and remote education.
Workflow Automation	Streamline administrative processes like curriculum review, assignment submission, budget requests, and document approvals with customizable workflow rules.
Advanced File Sharing	Set expiration dates, download limits, and access permissions for shared content to maintain control over intellectual property.
Compliance & Audit Tools	Generate detailed reports on file access, sharing, and system usage to demonstrate compliance and monitor resource utilization.
