Adding an image to a wiki page
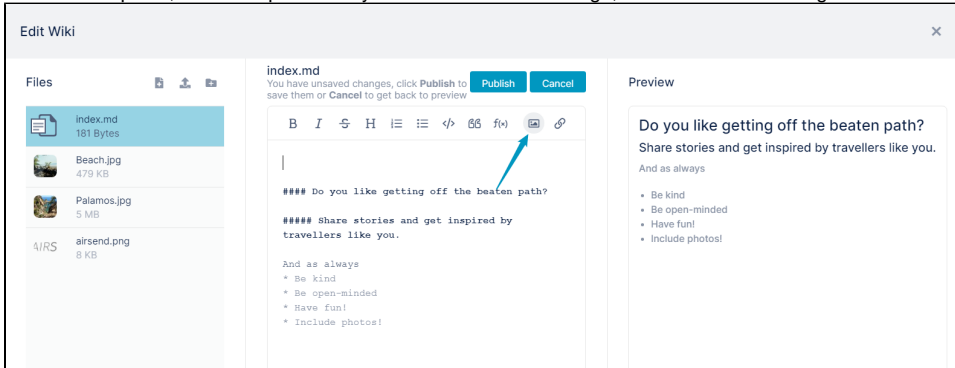

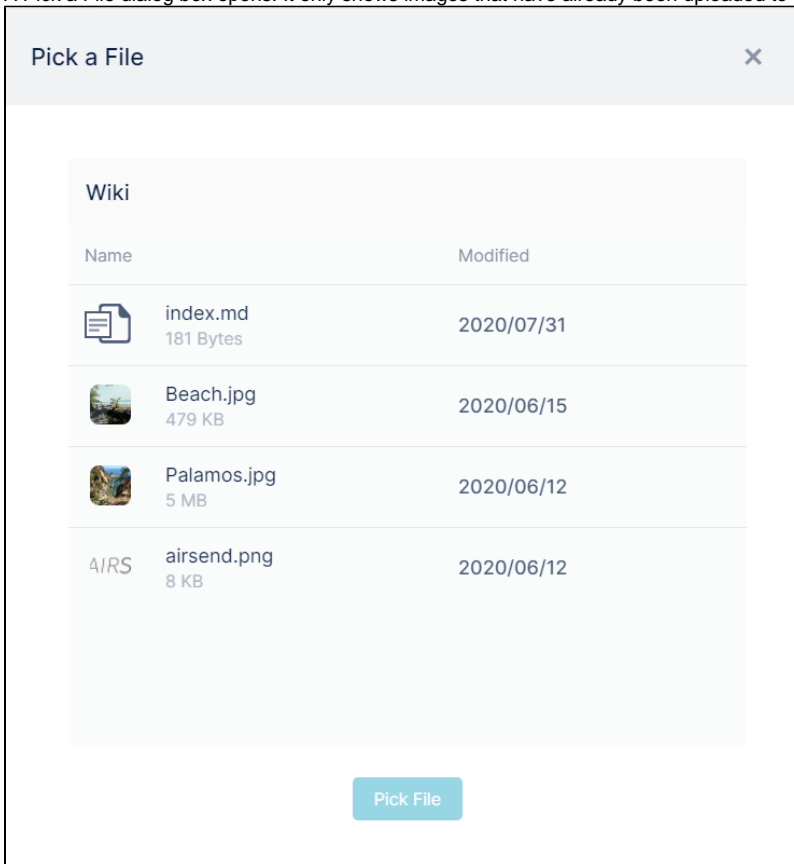

You can add an image to a wiki page. The image must first be stored in the wiki by uploading it to the wiki.

1. Open the wiki editor.
2. In the center panel, click the spot where you want to insert the image, and then click the image icon.

A Pick a File dialog box opens. It only shows images that have already been uploaded to the wiki.

3. Select the image file that you want to insert.
4. Click **Pick File**.
   The image file appears in the text editor in the format shown below.

You may change the text **My_Image** to something more descriptive for a screen reader or for reference. The Preview panel shows how the image will appear in the wiki.
