

Inline commands

There are a variety of commands that you can enter directly in a channel's chat bar - and the list is growing.

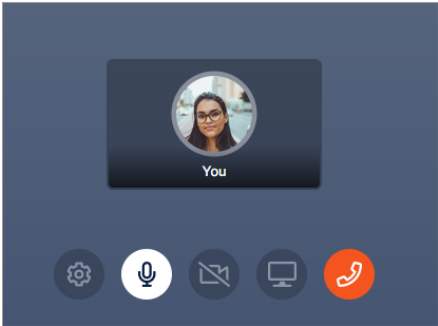

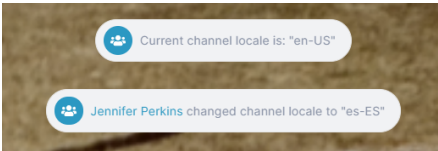

To enter a slash command:

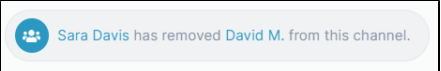

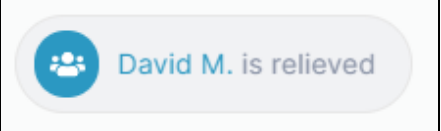

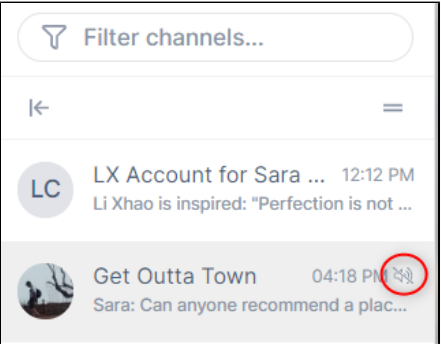

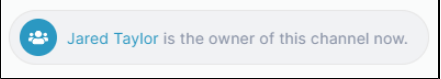

- 1. Open a channel.
- 2. In the chat bar, enter / (a forward slash).
A list of available commands appears above the chat bar.
The commands you see depend on your [member type](#).

- 3. Select the command, and then enter any additional information shown in brackets.

Commands

Command	DefinitionS	Effect
/call	Starts an AirSend meeting initiated by you.	
/channel_locale [new locale (optional)]	Shows the channel locale and optionally, changes it.	
/global_locale [new locale]	Changes the user's global locale.
